**Campaign Spending:** [List of Filers](#)

There are hundreds of decommissioned U.S. nuclear vessels free for the asking, each having at least 145 megawatt and desalinization capacity and 10 would provide the present electric and water needs of Oahu with an indefinite fuel supply.

Nuclear technology today is accident proof and breeder-recycling plutonium "waste" would generate 130 times the electricity as the fission of U-235 into plutonium. The residual could be mixed with concrete to provide ambient low level "hormesis" inducing radiation similarly to living in Colorado.

A floating, enclosable, no emission, chemistry chart access, desalinization commodity, plutonium economy would offer a protective environment for our posterity.

There are Tesla cold electric "ether" technologies without wires or shocks, and increase electricity's working capacity 100 fold. Meteor navigation and space exploration via magnetic fields is here. When California goes the tsunami will be 3 miles high. Ice ages, meteors, and super volcanoes are inevitable, 1% of all species are still here. Are we to be more successful than dinosaurs or no better?

Why not purge heavy and precious elements from the oceans as a self roving pool cleaner/recycling industrial paradise providing free energy systems for the world? Land belongs to no man, what is above the water will be underwater. Why not create unlimited wealth while phasing out a predatory petroleum economy?

Our problems are not being solved by sociopaths; the solutions are technical, not social. We have met the enemy and it is us." Pogo's admonition. When electricity is free, life will be a party. Hello?
